The most controversial method, culling, is considered by detractors as a cause of unnecessary suffering and by supporters as an effective way to regulate overabundant species and preserve biodiversity.

An Analysis of Lethal Methods of Wild Animal Population

Sampling vertebrate populations, modeling their population dynamics and the implications for management. Focus will be on study design, model assumptions, estimation of population parameters, and inference. State-of-the-art computer applications will be employed in laboratory exercises of actual and simulated data.
