the dark matter might still be accounted for within the Standard Model. For example, given that the local dark matter density is measured to be about  $7 \cdot 10^{-25} \text{g/cm}^3$  [8] and the characteristic velocity of the dark matter is presumably about

### **Theory of Dark Energy and Dark Matter**

In a nutshell, our theory indicates that dark energy and dark matter are respectively the positive and negative parts of the scalar potential energy caused by the non-uniform distribution of the universe, which fills every part of the universe.
