This thesis focuses on the dynamics of autonomous Boolean networks, on the basis of Boolean logic functions in continuous time without external clocking. These networks are realized with integrated circuits on an electronic chip as a field programmable gate array (FPGA) with roughly 100,000 logic gates, offering an extremely flexible model system.

Complex and Adaptive Dynamical Systems: A Primer We live in an ever extra advanced international, an epoch the place human activities can as a result gather far-reaching prospects. advanced and adaptive dynamical structures are ubiquitous on the planet surrounding us and require us to conform to new realities and how of facing them.

DYNAMICS OF NON-AUTONOMOUS DISCRETE DYNAMICAL SYSTEMS ... We study the dynamics of a

general non-autonomous dynamical system generated by a family of continuous self-maps on a compact space  $X$ . We derive necessary and sufficient conditions for the system to exhibit complex dynamical behavior. In the process we discuss properties like transitivity ...
