

knee surgery vol 2 pdf

The knee is a modified hinge joint, a type of synovial joint, which is composed of three functional compartments: the patellofemoral articulation, consisting of the patella, or "kneecap", and the patellar groove on the front of the femur through which it slides; and the medial and lateral tibiofemoral articulations linking the femur, or thigh bone, with the tibia, the main bone of the lower leg.

Knee - Wikipedia

In 1879, the French surgeon Segond described the existence of a "pearly, resistant, fibrous band" at the anterolateral aspect of the human knee, attached to the eponymous Segond fracture.

The patella, also known as the kneecap, is a thick, circular-triangular bone which articulates with the femur (thigh bone) and covers and protects the anterior articular surface of the knee joint. The patella is found in many tetrapods, such as mice, cats and birds, but not in whales, or most reptiles.. In humans, the patella is the largest sesamoid bone in the body.

Patella - Wikipedia

Surgery Overview. Surgery for anterior cruciate ligament (ACL) injuries involves reconstructing or repairing the ACL. ACL reconstruction surgery uses a graft to replace the ligament. The most common grafts are autografts using part of your own body, such as the tendon of the kneecap (patellar tendon) or one of the hamstring tendons. ...

Effects of technique variations on knee biomechanics

ABSTRACT " Knee pathologies including focal cartilage injuries, osteoarthritis (OA), and ligament injuries are common. The poor regeneration and healing potential of cartilage has led to the search for other treatment modalities with improved healing capacity. Furthermore, with an increasing elderly population that desires to remain active, the burden of knee pathologies is expected to increase.

Surgical site infections (SSIs) are among the most preventable health-care-associated infections and are a substantial burden to health-care systems and service payers worldwide in terms of patient morbidity, mortality, and additional costs. SSI prevention is complex and requires the integration of a range of measures before, during, and after surgery.

Menopause is the time in a woman's life when her normal menstrual periods have stopped for at least 12 months and she can no longer become pregnant. Not all women will have laboratory testing, but women with menopausal symptoms who may have premature ovarian failure or who are being evaluated for risk of other health problems, such as osteoporosis, may have one or more lab tests done.

3.3. Kinematic and Kinetic Parameters during Gait. Averaged kinematic trajectories of the hip, knee, and ankle joints in healthy controls and subjects with stroke in the BWSTT and CT groups are shown in Figure 2. Subjects with stroke were able to flex their hip joints comparable to the healthy control group but could not extend the hip adequately before training (Figures 2(a) and 2(b)).
