ESAIM: Mathematical Modelling and Numerical Analysis

Numerical analysis is the study of algorithms that use numerical approximation (as opposed to general symbolic manipulations) for the problems of mathematical analysis (as distinguished from discrete mathematics). Numerical analysis naturally finds application in all fields of engineering and the physical sciences, but in the 21st century also the life sciences, social sciences, medicine ...

Slope stability analysis is performed to assess the safe design of a human-made or natural slopes (e.g. embankments, road cuts, open-pit mining, excavations, landfills etc.) and the equilibrium conditions. Slope stability is the resistance of inclined surface to failure by sliding or collapsing. The main objectives of slope stability analysis are finding endangered areas, investigation of ...

13 Qualitative data mining Consider the mining of numerical data. Usually, in machine learning used for numerical data mining, the goal is to construct a numerical function of the form $y = f(x_1, x_2, \dots)$ where y is a distinguished variable called the dependent variable, and x_1, x_2, \dots are attributes (or independent variables).
