1. INTRODUCTION - A transistor is a small electronic device that can cause changes in a large electrical output signal by small changes in a small input signal. That is, a weak input signal can be amplified (made stronger) by a transistor. For example, very weak radio signals in the air can be picked up by a wire antenna and processed by transistor amplifiers until they are strong enough to be ...

We, all of us, are rapidly running out of time. If the biosphere is not soon freed from the ongoing global climate engineering assault, there will very soon be nothing left to salvage of our once thriving planet.. Photo credit: Oregon Air National Guard. If we are to have any chance of altering our current course in time to make a difference, the effort will take all of us.
